receiving a request to process input including a resource identifier unavailable for registration;
providing a user with an interface to one of a perform a resource identifier aftermarket request
and one of an access and display aftermarket status of said resource identifier; and,
performing said request independent of said providing said interface at any time after said
receiving said request to process said input.

Claim 13 (new): A method, as set forth in claim 12, further including inputting said resource identifier
from a user interface element.

Claim 14 (new): A method, as set forth in claim 13, wherein said inputting said resource identifier from
a user interface element includes inputting said resource identifier into one of a one of a browser location
field, text box object, command line, speech to text interface, optical recognition interface, and magnetic
recognition interface.

Claim 15 (new): A method, as set forth in claim 12, further including performing said resource identifier
aftermarket request.

Claim 16 (new): A method, as set forth in claim 15, wherein said performing said resource identifier
aftermarket request includes performing one of an auction request, bid request, appraisal request,
registrar transfer request, listing request, identifier monitoring request, pre-order request, WHOIS
request, and expiry time remaining request corresponding to at least a portion of said resource identifier.

Claim 17 (new): A method, as set forth in claim 12, wherein said providing said user with said interface
includes automatically providing said user with said interface in response to said receiving said request to
process said input.

Claim 18 (new): A method, as set forth in claim 12, wherein said receiving said request to process said
input includes receiving one of a resource location request, search engine request, resource identifier
registration request, and resource identifier availability request.

Claim 19 (new): A network request method comprising:

receiving a request to process input including a resource identifier unavailable for registration;
determining from a back-order registry whether the resource identifier is back-ordered;
providing a back-order registration form upon said determining that the resource identifier is not
